From Representation Theory to Homotopy Groups (**Memoirs of the American Mathematical Society**)
Donald M. Davis

A formula for the odd-primary v1-periodic homotopy groups of a finite H-space in terms of its K-theory and Adams operations has been obtained by Bousfield. This work applies this theorem to give explicit determinations of the v1-periodic homotopy groups of (E8,5) and (E8,3), thus completing the determination of all odd-primary v1-periodic homotopy groups of all compact simple Lie groups, a project suggested by Mimura in 1989. The method is different to that used by the author in previous works. There is no homotopy theoretic input, and no spectral sequence calculation. The input is the second exterior power operation in the representation ring of E8, which we determine using specialized software. This can be interpreted as giving the Adams operation ψ^2 in K(E8). Eigenvectors of ψ^2 must also be eigenvectors of ψ^k for any k. The matrix of these eigenvectors is the key to the analysis. Its determinant is closely related to the homotopy decomposition of E8 localized at each prime. By taking careful combinations of eigenvectors, a set of generators of K(E8) can be obtained on which there is a nice formula for all Adams operations. Bousfield's theorem (and considerable Maple computation) allows the v1-periodic homotopy groups to be obtained from this.

From reader reviews:

John Cleveland:

Have you spare time for a day? What do you do when you have far more or little spare time? That's why, you can choose the suitable activity for spend your time. Any person spent their very own spare time to take a walk, shopping, or went to the actual Mall. How about open or maybe read a book titled From Representation Theory to Homotopy Groups (Memoirs of the American Mathematical Society)? Maybe it is to become best activity for you. You already know beside you can spend your time with the favorite's book, you can cleverer than before. Do you agree with their opinion or you have various other opinion?

Donald Hamann:

The book From Representation Theory to Homotopy Groups (Memoirs of the American Mathematical Society) can give more knowledge and information about everything you want. So why must we leave the good thing like a book From Representation Theory to Homotopy Groups (Memoirs of the American Mathematical Society)? Several of you have a different opinion about guide. But one aim that book can give many facts for us. It is absolutely correct. Right now, try to closer together with your book. Knowledge or data that you take for that, it is possible to give for each other; it is possible to share all of these. Book From Representation Theory to Homotopy Groups (Memoirs of the American Mathematical Society) has simple shape however, you know: it has great and big function for you. You can search the enormous world by open up and read a reserve. So it is very wonderful.

Laura Mason:

Are you kind of occupied person, only have 10 or maybe 15 minute in your moment to upgrading your mind ability or thinking skill also analytical thinking? Then you are receiving problem with the book as compared to can satisfy your short space of time to read it because all this time you only find book that need more time to be examine. From Representation Theory to Homotopy Groups (Memoirs of the American Mathematical Society) can be your answer mainly because it can be read by you who have those short free time problems.

Harold Singleton:

As we know that book is important thing to add our know-how for everything. By a reserve we can know everything we wish. A book is a set of written, printed, illustrated or blank sheet. Every year was exactly added. This guide From Representation Theory to Homotopy Groups (Memoirs of the American Mathematical Society) was filled about science. Spend your spare time to add your knowledge about your scientific research competence. Some people has different feel when they reading the book. If you know how big selling point of a book, you can sense enjoy to read a guide. In the modern era like today, many ways to get book which you wanted.
