Anatomy in art; a practical text book for the art student in the study of the human form. To which is appended a description and analysis of the art ... of proportion as applied to the human figure Jonathan Scott Hartley

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1891 Excerpt: ... three additional thumb extensors. The two muscles forming the upper and outer division of this mass are the supinator longus and the long extensor carpi radialis. Both of these muscles arise from the external condyloid ridge of the humerus (that portion of the shaft immediately above the outer condyle.) The supinator arises from the upper two-third of the ridge, and is inserted into the base of the styloid process of the radius. It is the most superficial muscle of the two. The long extensor, carpi radialis, is placed partly underneath the preceding muscle, and arises from the lower third of the condyloid ridge of the humerus, and is inserted into the base of the metacarpal bone of the index finger. It runs along the outer border of the radius, and its tendon goes beneath the extensor tendons of the thumb. SECOND SUB-MASS. The common extensor of fingers; extensor carpi ulnaris; anconeus; extensors of thumb. The common exténsor of fingers and extensor carpi ulnaris arise by one common tendon from the outer condyle of the humerus. The common extensor of the fingers is situated in the center of the extensor mass in the back of the forearm. Proceeding towards the wrist, just below the middle of the fore-arm, it divides into three tendons which pass under the annular ligament. The tendons then converge--the middle tendon divides into two, and all are inserted into the second and third phalanges of the fingers. The tendons of the middle and ring fingers are connected, together by thin slips of tendon. The index and little fingers have additional tendons. The tendon only of the extensor minimi digiti--the muscle that supplies the special tendon for the little finger--appears on the surface on the back of the hand. The special tendon for the index finger...
