## **ProAir HFA (Albuterol): Treats Bronchospasm with Reversible Obstructive Airway Disease & Exercise-Induced Bronchospasm in Patients 4 Years of Age and Older** James Lee Anderson

“Although, your health condition may impact your everyday life, do not let it define who you are.” ProAir HFA (albuterol) is used to treat or prevent bronchospasm in patients with asthma, bronchitis, emphysema, and other lung diseases. This medicine is also used to prevent wheezing caused by exercise (exercise-induced bronchospasm). Albuterol belongs to the family of medicines known as adrenergic bronchodilators. Adrenergic bronchodilators are medicines that are breathed in through the mouth to open up the bronchial tubes (air passages) in the lungs. They relieve cough, wheezing, shortness of breath, and troubled breathing by increasing the flow of air through the bronchial tubes. This medicine is available only with your doctor's prescription. Thanks and may you have a good understanding about this drug—ProAir HFA. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
